VLT TOKENOMICS

FINAL MAINNET EDITION

BNB Smart Chain | August 2026

200,000,000 VLT

FIXED SUPPLY • NO MINTING

Official Mainnet Contract

0xE90714e6e4becEc65F33D3099F95B42B6e3168aE

Verified Exact Match on BscScan

Executive Tokenomics Summary

VoltPay tokenomics are designed to support a controlled launch, transparent supply management, sustainable liquidity growth and long-term ecosystem development. The model uses a fixed 200,000,000 VLT supply with no minting capability and separates long-term reserves, founder holdings, team vesting, liquidity, presale and operating allocations into clearly defined categories.

Current status: The VLT smart contract is deployed on BNB Smart Chain Mainnet and verified on BscScan as an Exact Match. Trading remains disabled while launch preparation, locks, vesting, presale and liquidity steps are completed.

Core Parameters

Parameter	Final Mainnet Setting
Network	BNB Smart Chain (BSC Mainnet)
Token	VoltPay (VLT)
Total Supply	200,000,000 VLT (fixed)
Decimals	18
Minting	None
Buy Fee	2%
Sell Fee	4%
Fee Processing	Manual/keeper-compatible processFees()
Processed Fee Split	50% Liquidity / 50% Treasury
Mainnet Contract	0xE90714e6e4becEc65F33D3099F95B42B6e3168aE
Trading Status	Disabled during launch preparation

Final Distribution

Allocation	VLT	Supply
Strategic Reserve - Long Lock	100,000,000	50.0%
Founder Allocation	20,000,000	10.0%
Team - Vesting	10,000,000	5.0%
Liquidity Reserve	25,000,000	12.5%
Presale	15,000,000	7.5%
Ecosystem & Partnerships	15,000,000	7.5%
Marketing & Community	10,000,000	5.0%
Development & Operations	5,000,000	2.5%
TOTAL	200,000,000	100.0%

1. Allocation Strategy

1.1 Strategic Reserve - 100,000,000 VLT (50%)

The largest allocation is designated for a long-term on-chain lock. It is reserved for future ecosystem scaling, strategic liquidity needs, institutional relationships and major partnerships. It is not intended for immediate circulation. Lock details and public proof links will be published after the lock transaction is completed.

1.2 Founder Allocation - 20,000,000 VLT (10%)

This allocation represents the founder's disclosed long-term economic stake in VoltPay. It is separate from the 100,000,000 VLT Strategic Reserve and the 10,000,000 VLT Team allocation. The founder wallet will be publicly identifiable, and any future realization or distribution is intended to be managed with consideration for market liquidity, project obligations and long-term ecosystem stability.

1.3 Team Allocation - 10,000,000 VLT (5%)

The team allocation is intended to be secured by an on-chain vesting structure to align contributors with the long-term development of VoltPay.

- 0% unlocked at launch
- 3-month cliff
- 12-month linear vesting after the cliff
- Public vesting contract and schedule to be disclosed after deployment

1.4 Presale - 15,000,000 VLT (7.5%)

Reserved for the public presale. Final presale parameters - including price, hard cap, soft cap, timing and any per-wallet limits - will be published before participation begins. Unsold presale tokens will not be released directly into unrestricted circulating supply; they may be reallocated to the Liquidity/Ecosystem Reserve or placed under an additional lock.

1.5 Liquidity Reserve - 25,000,000 VLT (12.5%)

Reserved for initial VLT/BNB liquidity and future liquidity needs. The full reserve is not required to enter the pool at launch. Actual VLT deposited into liquidity will be determined by the BNB side, target launch price and final presale outcome. LP tokens are intended to be locked after liquidity is created, with the proof link published publicly.

1.6 Ecosystem, Marketing and Operations - 30,000,000 VLT (15%)

- 15,000,000 VLT - Ecosystem & Partnerships: merchant, wallet, integration and partnership programs
- 10,000,000 VLT - Marketing & Community: growth, community programs and campaign activity
- 5,000,000 VLT - Development & Operations: infrastructure, product development and operating needs

2. Locks, Vesting & Circulating Supply

VoltPay separates allocation labels from actual circulating supply. A token is treated as circulating only when it is genuinely available to the market or ecosystem, not merely because it exists in the fixed supply.

2.1 Planned Supply Controls

- 100,000,000 VLT (50% of total supply) designated for a long-term Strategic Reserve lock
- 10,000,000 VLT (5%) designated for Team vesting with 0% unlocked at launch
- Liquidity-provider tokens intended to be locked after the VLT/BNB pool is created
- Presale unsold tokens not intended for unrestricted release into circulation
- Public on-chain proof links to be published after each lock/vesting transaction

Circulating supply policy: VoltPay will not publish an artificial circulating-supply figure before the launch allocations are actually executed. Final circulating supply will be calculated from on-chain balances after presale, liquidity creation, locks, vesting and any operational distributions.

3. Fee & Liquidity Model

VLT uses a transaction-fee model designed to support liquidity and project operations without requiring a swap inside every ordinary user transfer.

Transaction	Fee
Buy	2%
Sell	4%

3.1 Fee Processing

Collected VLT fees accumulate on the token contract. They are processed through the contract function `processFees()`, which can be called by an authorized fee processor. This design separates fee conversion from ordinary user transfers and allows processing to be performed manually or by a controlled keeper service.

3.2 Processed Fee Allocation

Destination	Share	Purpose
Liquidity	50%	Adds liquidity to strengthen pool depth
Treasury	50%	Supports product, infrastructure, operations and approved growth activity

Important: Liquidity support can improve market depth and reduce price impact, but it does not guarantee price appreciation, a price floor or protection from market losses.

4. Utility & Ecosystem Role

VLT is intended to function as the native utility asset of the VoltPay ecosystem. Token utility is expected to expand alongside wallet adoption, merchant integrations and payment infrastructure.

- VLT transfers and payments through official VoltPay interfaces
- Wallet-native token utility and ecosystem access
- Merchant and marketplace payment integrations
- Ecosystem incentives and rewards where applicable
- Gas-sponsored VLT transfers planned for eligible transfers inside official VoltPay clients
- Future services announced through official VoltPay channels

5. Sustainability & Operating Model

VoltPay is designed to reduce dependence on continuous token sales by combining fee-supported liquidity, treasury funding, wallet infrastructure and future business integrations. Trading fees create operational inflow only when real market activity exists; they should not be interpreted as guaranteed revenue.

Operational priorities

- Maintain transparent allocation and public on-chain proof for material locks and vesting
- Use treasury resources for product, infrastructure, integrations, compliance and approved growth activity
- Avoid artificial volume, fake holders or misleading market activity
- Monitor liquidity depth, holder concentration and operational risks as the market develops
- Separate founder holdings, team vesting, strategic reserves and project treasury for clear public reporting

6. Transparency & Mainnet References

Item	Reference
Network	BNB Smart Chain - Chain ID 56

BscScan Verification	Verified - Exact Match
Compiler	Solidity 0.8.35 / optimizer 200 runs / EVM Paris
Source SHA-256	9d708e7e874bdf72533d1f59d976049dfeeff9f3555aeccfd4c2bfdc94cbcdade

7. Risk Disclosure

VLT is a cryptoasset and may experience substantial price volatility or loss of value. Liquidity depth, market participation, smart-contract dependencies, wallet infrastructure, third-party integrations, merchant adoption and regulatory conditions can affect project operations and market outcomes. Tokenomics describe intended allocation and operating rules; they do not constitute a guarantee of profit, price appreciation, investment return or future market value.

VOLTPAY (VLT)

TOKENOMICS

FINAL MAINNET EDITION

Built for transparent supply management, sustainable liquidity and long-term ecosystem utility.
