

VOLTPAY

VLT TOKENOMICS

VERSION 3.0 - PRESALE EDITION

BNB Smart Chain | September 2026

200,000,000 VLT
FIXED SUPPLY - NO MINTING

Official Mainnet Contract
0xE90714e6e4becEc65F33D3099F95B42B6e3168aE
Verified Exact Match on BscScan

THIS VERSION SUPERSEDES PREVIOUS VOLTPAY ALLOCATION AND PRESALE SECTIONS

Executive Tokenomics Summary

VoltPay tokenomics are designed to support a controlled launch, transparent supply management, sustainable liquidity growth and long-term ecosystem development. Version 3.0 preserves the fixed 200,000,000 VLT supply and the deployed mainnet contract while updating the public presale parameters, allocation presentation and transparency framework.

Revision notice: Version 3.0 supersedes earlier VoltPay token allocation and presale-planning sections. The total supply, token contract, fees and core smart-contract mechanics remain unchanged.

Current status: The VLT smart contract is deployed on BNB Smart Chain Mainnet and verified on BscScan as an Exact Match. Public trading remains disabled during launch preparation.

Core Parameters

Parameter	Current Mainnet Setting
Network	BNB Smart Chain (BSC Mainnet)
Token	VoltPay (VLT)
Total Supply	200,000,000 VLT (fixed)
Decimals	18
Minting	None
Buy Fee	2%
Sell Fee	4%
Fee Processing	Manual/keeper-compatible processFees()
Processed Fee Split	50% Liquidity / 50% Treasury
Mainnet Contract	0xE90714e6e4becEc65F33D3099F95B42B6e3168aE
Trading Status	Disabled during launch preparation

Final Distribution - Version 3.0

Allocation	VLT	Supply
Strategic Reserve	100,000,000	50.0%
Founder Allocation	20,000,000	10.0%
Presale	30,000,000	15.0%
Liquidity Reserve	20,000,000	10.0%
Team	10,000,000	5.0%
Marketing & Community	8,000,000	4.0%
Exchange Listings & Market Expansion	7,000,000	3.5%
Development & Operations	5,000,000	2.5%
TOTAL	200,000,000	100.0%

1. Allocation Strategy

1.1 Strategic Reserve - 100,000,000 VLT (50%)

The Strategic Reserve supports long-term ecosystem scaling, strategic liquidity needs, institutional relationships, major integrations and other material ecosystem initiatives. Allocation-specific lock and vesting evidence is maintained through VoltPay's public transparency resources.

1.2 Founder Allocation - 20,000,000 VLT (10%)

The Founder Allocation represents the founder's disclosed economic stake in the project. Any applicable lock, vesting or strategic-contributor arrangements affecting this allocation are documented through the project's transparency resources. Personal names are not required in public tokenomics materials.

1.3 Team Allocation - 10,000,000 VLT (5%)

The Team Allocation supports long-term contributors across development, operations, product, support and market expansion. Team distributions may use on-chain vesting structures, with role-based public disclosure and without unnecessary publication of personal names.

1.4 Presale - 30,000,000 VLT (15%)

Up to 30,000,000 VLT is reserved for the planned public presale. Current target parameters are:

- Soft Cap: USD 50,000 equivalent
- Hard Cap: USD 200,000 equivalent
- Presale Price: USD 0.0068 per VLT
- Planned Listing Price: USD 0.0076 per VLT
- Minimum Contribution: USD 25 equivalent
- Maximum Contribution: USD 5,000 equivalent per wallet
- Duration: 14 days
- Liquidity Allocation: 75%
- LP Lock: 365 days
- Buyer Vesting: 60% at TGE/finalization; 20% after 15 days; 20% after 30 days
- Unsold Tokens: returned to the project, segregated and reserved for transparent future ecosystem use; not automatically burned

1.5 Liquidity Reserve - 20,000,000 VLT (10%)

Reserved for initial VLT/BNB liquidity and future pool-strengthening needs. The amount deposited at launch depends on the final presale result, launchpad mechanics and listing price. Liquidity-provider tokens generated at launch are planned to be locked for 365 days.

1.6 Growth, Listings and Operations - 20,000,000 VLT (10%)

- 8,000,000 VLT - Marketing & Community: content, community growth, creator campaigns and approved promotional activity.
- 7,000,000 VLT - Exchange Listings & Market Expansion: exchange applications, integrations, market-data services and expansion initiatives.
- 5,000,000 VLT - Development & Operations: product development, infrastructure, security and operating needs.

2. Locks, Vesting & Circulating Supply

VoltPay separates allocation labels from actual circulating supply. Lock and vesting details are verified through on-chain records and maintained on the project's dedicated transparency page.

2.1 Transparency Policy

- Strategic, founder, team and other designated allocations may be subject to on-chain locking or vesting schedules.
- Individual lock and vesting records are maintained separately from the main Tokenomics document.
- Liquidity-provider tokens generated at launch are planned to be locked for 365 days.
- Unsold presale tokens are not intended for unrestricted market release and will remain segregated for transparent future ecosystem use.
- Official transparency page: <https://voltpay.org/transparency>

Circulating-supply policy: VoltPay will determine and publish circulating supply from executed on-chain balances after presale, liquidity creation, vesting releases and operational distributions. An allocation label alone does not make tokens non-circulating.

3. Fee & Liquidity Model

VLT uses a transaction-fee model designed to support liquidity and project operations without requiring a swap inside every ordinary user transfer.

Transaction	Fee
Buy	2%
Sell	4%

3.1 Fee Processing

Collected VLT fees accumulate on the token contract. They are processed through the contract function `processFees()`, which can be called by an authorized fee processor. This design separates fee conversion from ordinary user transfers and allows controlled manual or keeper-based processing.

3.2 Processed Fee Allocation

Destination	Share	Purpose
Liquidity	50%	Supports pool depth
Treasury	50%	Supports product, infrastructure, operations and approved growth activity

Important: Liquidity support can improve market depth and reduce price impact, but it does not guarantee trading volume, price appreciation, a price floor or protection from market losses.

4. Utility & Ecosystem Role

VLT is intended to function as the native utility asset of the VoltPay ecosystem. Utility is expected to expand alongside wallet adoption, merchant integrations and payment infrastructure.

- VLT transfers and payments through official VoltPay interfaces
- Wallet-native token utility and ecosystem access
- Merchant and marketplace payment integrations
- Ecosystem incentives and rewards where applicable
- Gas-sponsored VLT transfers planned for eligible transfers inside official VoltPay clients
- Future services announced through official VoltPay channels

5. Sustainability & Operating Model

VoltPay is designed to reduce dependence on continuous token sales by combining fee-supported liquidity, treasury funding, wallet infrastructure and future business integrations. Trading fees create operational inflow only when genuine market activity exists; they are not guaranteed revenue.

Operational priorities

- Maintain transparent allocation and on-chain verification for material locks and vesting
- Use treasury resources for product, infrastructure, integrations and approved growth activity
- Avoid artificial volume, fake holders or misleading market activity
- Monitor liquidity depth, holder concentration and operational risks
- Separate founder, team, strategic-reserve and project-treasury accounting
- Publish material allocation changes through official VoltPay channels

6. Transparency & Mainnet References

Item	Reference
Network	BNB Smart Chain - Chain ID 56

7. Risk Disclosure

VLT is a cryptoasset and may lose value. Liquidity, market participation, smart-contract dependencies and third-party services can affect project operations and market outcomes. Presale completion, market activity, listings, integrations and future utility are not guaranteed. This document does not guarantee profit, price appreciation, trading volume or future market value and does not constitute legal, tax or investment advice.

VOLTPAY (VLT)

TOKENOMICS

VERSION 3.0 - PRESALE EDITION

Built for transparent supply management, sustainable liquidity and long-term ecosystem utility.
