VOLTPAY

VLT WHITEPAPER

VERSION 3.1 - ECOSYSTEM & TOKEN UPDATE

BNB Smart Chain | November 9, 2026

UTILITY | PAYMENTS | WALLET | AI

200,000,000 VLT

FIXED SUPPLY - NO MINTING

Official Mainnet Contract

0xE90714e6e4becEc65F33D3099F95B42B6e3168aE

Verified Exact Match on BscScan

147M LOCKED / VESTING | 53M UNLOCKED ALLOCATIONS

Supersedes Version 3.0 Rev2 Presale Edition (September 2026)

Executive Summary

VoltPay is a Web3 ecosystem that combines a **non-custodial wallet**, the **VoltAI** assistance layer and **VoltPay (VLT)**, a fixed-supply token on BNB Smart Chain. The aim is to simplify access to digital-asset workflows and to develop practical utility for payments, wallet services and future integrations.

The VLT smart contract is deployed and verified on BNB Smart Chain Mainnet. A third-party **Cyberscope smart-contract audit** and **Cyberscope project KYC record** are publicly available. This edition reflects the unsuccessful GemPad presale, November 2026 reserve restructuring, newly created ecosystem token lock and preparation for an initial PancakeSwap V2 market.

Current launch position - November 9, 2026: The contract-level trading flag is enabled, but initial VLT/WBNB liquidity has not yet been reported as deposited. The pair address alone does not establish live trading or an executable market.

Core Mainnet Parameters

Parameter	Current Setting
Network / Token	BNB Smart Chain (BSC Mainnet), Chain ID 56 / VoltPay (VLT)
Token Standard	BEP-20; ERC-20-compatible interface
Total Supply / Decimals	200,000,000 VLT (fixed) / 18
Minting	No additional supply minting function
Transaction Fees	2% on qualifying buys / 4% on qualifying sells
Fee Conversion	Authorized manual processFees(); not an automatic per-trade swap
Processed Fee Value	50% to liquidity / 50% to the VLT token Treasury
Trading / DEX	Enabled in token contract / initial pool liquidity pending
Mainnet Contract	0xE90714e6e4becEc65F33D3099F95B42B6e3168aE
VLT/WBNB Pair	0x6cFF8650a2e8Affd64a48eaf227A0C74cE767892

What Changed in Version 3.1

- Updated the distribution of **200 million VLT**: 147 million locked/vesting and 53 million in disclosed unlocked allocations.
- Replaced planned presale terms with the completed GemPad outcome and the current PancakeSwap V2 preparation status.
- Added all seven reserve addresses, independent audit and KYC links, and separate statements about token custody and project/company finances.

1. Introduction & Vision

VoltPay is designed to make blockchain-based interactions more accessible without requiring custodial control of users' private keys. The token and applications form related but distinct parts of the ecosystem: the token has its own contract and allocations, while the wallet products have separate operational and development responsibilities.

2. Problem & Market Context

- Wallets, networks and token transfer workflows can be difficult for new users.
- Fiat access, on-chain services and digital-asset payment tools remain fragmented.
- Understanding network fees, security and transaction finality requires substantial user education.
- Many token projects do not provide a clear connection between the token and working software.

3. The VoltPay Approach

- **VoltPay Wallet:** self-custodial interfaces for compatible digital-asset transactions.
- **VoltAI:** integrated assistance and product onboarding, without investment-return guarantees.
- **VLT:** a fixed-supply token intended for payments and ecosystem utility as features develop.
- **Partner services:** fiat on-ramp, merchant services and integrations subject to technical and regulatory approval.

4. Design Principles

- **Self-custody:** wallet users remain responsible for protecting their credentials and authorizing transactions.
- **Verification:** token contract, reserve transfers, vesting and lock records should be independently checkable.
- **Transparent supply:** distinguish time locks, founder ownership, project reserves and actual market liquidity.
- **Practical utility:** pursue product adoption instead of relying on speculative trading assumptions.
- **Risk-aware launch:** distinguish completed milestones, pending market deployment and longer-term proposals.

5. Ecosystem Architecture

Layer	Function
User Interface	Web wallet, Telegram integration, published iOS and Android apps, and Chrome browser extension.
Assistance	VoltAI guidance, user support and future contextual automation.
Token Economy	VLT transfers, potential payment use cases, disclosed reserves and token Treasury.
Blockchain	BNB Smart Chain, verified BEP-20 token and PancakeSwap V2 pool infrastructure.

6. Product Components & Availability

6.1 VoltPay Wallet

VoltPay Wallet is a non-custodial product aimed at providing user-controlled access to compatible digital assets. Web and Telegram experiences are part of the public ecosystem. VoltPay AI Wallet is now publicly listed in the Apple App Store for iPhone and iPad and on Google Play for Android; a Chrome wallet extension is also published. Availability of individual features should be checked in the corresponding current application release.

iOS - VoltPay AI Wallet on Apple App Store

Android - VoltPay AI Wallet on Google Play

Chrome Web Store - Volt Wallet extension

6.2 VoltAI

VoltAI supports contextual assistance and onboarding across selected VoltPay interfaces. Planned capabilities may include deeper wallet-level guidance, additional languages and future automation. VoltAI is not a guarantee of accuracy and does not replace independent transaction review.

6.3 VLT Token Utility

- VLT transfers and potential wallet-native payment experiences.
- Possible merchant and marketplace acceptance as integrations become available.
- Approved community incentives, ecosystem access and token-related services.
- Potential gas-sponsored transfers where infrastructure covers network fees for eligible requests.

Product status and limitations: VoltPay AI Wallet is published in the Apple App Store and Google Play, and the Chrome extension is listed. Licensed on-ramps, merchant integrations and sponsored transfer programs should not be described as generally available without separate confirmation. Every BNB Chain transfer still consumes network gas.

6.4 Separation of Roles

VOLT-LABS LLC is the company associated with wallet and application development. The VLT token and its Treasury/founder allocations are separately controlled and reported; they must not be described as assets held by, or customer deposits of, the application company.

7. VLT Tokenomics - Version 3.1

VLT has a **fixed total supply of 200,000,000 tokens**. The November 2026 restructuring changes documented allocations and wallet organization, not the deployed contract or the token supply.

Allocation snapshot - 9 November 2026: 147,000,000 VLT (73.5%) held in locks/vesting; 53,000,000 VLT (26.5%) held as disclosed unlocked project and founder allocations.

Allocation	VLT	Supply	Status
Strategic Reserve	100,000,000	50.0%	Locked
Founder - Locked	10,000,000	5.0%	Locked
Team Vesting	10,000,000	5.0%	Vesting
Strategic Investor Vesting	2,000,000	1.0%	Vesting
Ecosystem Reserve Lock	25,000,000	12.5%	Locked
Liquidity & Launch Preparation	20,000,000	10.0%	Unlocked
Founder - Unlocked	10,000,000	5.0%	Unlocked
Marketing & Community	7,000,000	3.5%	Unlocked
Exchange Listings	6,000,000	3.0%	Unlocked
Development & Operations	5,000,000	2.5%	Unlocked
Future Funding	5,000,000	2.5%	Unlocked
TOTAL	**200,000,000**	**100.0%**	

73.5% locked / vesting **26.5% unlocked allocations**

7.1 Allocation Notes

- The Founder allocation totals **20M VLT**: 10M locked and 10M unlocked in the Founder wallet.
- The liquidity allocation totals **20M VLT**: 18M in the Liquidity Reserve and 2M in the Mainnet Deployer wallet.
- The former presale line of 30M VLT has been replaced by **25M Ecosystem Reserve** and **5M Future Funding**. No additional tokens were minted.

Supply terminology: Unlocked tokens are not automatically circulating, traded, deposited in a DEX pool or owned by unrelated investors. Current circulating supply requires a separate methodology and on-chain review.

8. Token Locks & Vesting

Long-term commitments are recorded in PinkLock. Each locker is governed by its specific on-chain terms, release date and beneficiary. The figures below are a **project-reported snapshot dated November 9, 2026**; current balances and releases should always be confirmed against the locker records.

Allocation	VLT	Unlock / Release	PinkLock ID
Strategic Reserve	100,000,000	7 Oct 2027, 12:00 UTC	1890489
Founder - Locked	10,000,000	7 Oct 2027, 12:00 UTC	1890512
Team Vesting	10,000,000	First release 7 Dec 2026*	11 records
Strategic Investor	2,000,000	First release 7 Dec 2026*	1892326
Ecosystem Reserve	25,000,000	9 Nov 2027, 12:00 UTC	Verify new record
TOTAL	**147,000,000**	**73.5% of total supply**	

* Team and investor monthly vesting schedules were stated in the September 2026 documents as 10% first release, then 10% every 30 days. Exact schedules and individual beneficiary terms are defined by the underlying on-chain locker records.

View VLT locks and vesting on PinkLock

8.1 Team Vesting Records - 10,000,000 VLT

The full Team allocation was divided into eleven PinkLock vesting records. Published record IDs: **1890538, 1890567, 1890568, 1890595, 1890644, 1892322, 1892515, 1892521, 1892522, 1892671, 1892872**. Together they represent the Team allocation, not an additional allotment.

8.2 Historical Change & New Ecosystem Lock

A former 20,000,000 VLT Investor Protection Lock completed its term and was withdrawn before the restructuring. On November 9, 2026, a separate 25,000,000 VLT Ecosystem Reserve Lock was created, with its stated unlock date of November 9, 2027 at 12:00 UTC. The new 25M commitment is counted once in the updated 147M figure.

8.3 LP Lock Is a Different Instrument

A token lock of VLT in PinkLock is **not** the same as a lock of PancakeSwap liquidity-provider (LP) tokens. Initial liquidity has not been reported as seeded; any LP token lock is pending until it is actually executed and independently verified.

8.4 Circulating Supply

The 53M unlocked allocation is an administrative category, not proof of a 53M market float. Actual public float, treasury-controlled balances, vesting releases and DEX liquidity must be assessed separately.

9. Disclosed Reserve Wallets

The following seven addresses received the **53,000,000 VLT unlocked allocation** in the November 9, 2026 restructuring. Balances are a dated post-transfer snapshot. For each address, click the link to review token holdings and transfer history on BscScan.

Wallet / Purpose	VLT / Share	Full Address - Click to Verify
Mainnet Deployer - Launch	2,000,000 / 1.0%	0x5C6D50A3f249C8a5c48029Cf0c119E760Af48dD4
Liquidity Reserve	18,000,000 / 9.0%	0x9DD74d4817a1160c5474D899746AD0C1d6F03223
Marketing & Community	7,000,000 / 3.5%	0xB4811829f30F42248A52B63040943C8aC24b8805
Exchange Listings	6,000,000 / 3.0%	0x698Ce039C0b951e88e4AC4c85099aE2f54bE97B9
Development & Operations	5,000,000 / 2.5%	0x8D950eA14fE8C60a12820305ddFc7B5e6B1663C2
Future Funding	5,000,000 / 2.5%	0x54B421424a52C5D05CD185AA4C3EFBf742234E45
Founder - Unlocked	10,000,000 / 5.0%	0x4b89E0ff7aC48646a1Cd0C48bfDeE658DaF57646

9.1 What the Wallets Are For

- **Liquidity (20M VLT combined):** initial launch preparation and possible additional pool depth.
- **Marketing (7M) / Listings (6M):** disclosed growth activities and exchange-integration needs.
- **Development (5M) / Future Funding (5M):** token-project operations and potential strategic funding arrangements.
- **Founder (10M unlocked):** independently disclosed personal allocation, separate from company accounts.

Control disclosure: These accounts were assigned distinct functions but are not independent investor wallets. They remain under founder/project control, and the tokens in them are not time-locked. Wallet labels created locally in MetaMask are not automatically public BscScan labels.

9.2 Continuous Verification

The reported wallet totals reconcile to **53,000,000 VLT**, and 147M + 53M = **200M VLT**. Future transfers will change address-level balances; analysts should use real-time chain records rather than treat this table as a permanent current-balance guarantee.

10. Presale Outcome & DEX Transition

10.1 Historical GemPad Presale

After the earlier PinkSale campaign, VLT used GemPad for a further public presale attempt. The **GemPad campaign ended without reaching the required soft cap** and did not finalize as a successful token sale. Allocated tokens were returned to project control for the disclosed November 2026 restructuring.

Historical Metric	Result
Platform / Network	GemPad / BNB Smart Chain
Soft Cap	26 BNB
Result	Ended - soft cap not reached
Contributions	0.036 BNB across three participants (project-reported)
Historical Presale Price	USD 0.0068 / VLT
Previous Target Listing Price	USD 0.0076 / VLT; not a live or guaranteed price
Participant Refunds	Eligibility and settlement depend on GemPad; verify per transaction

Open historical GemPad campaign

10.2 Preparation for PancakeSwap V2

The VLT/WBNB pair has been created on PancakeSwap V2 on BNB Smart Chain. Contract-level trading was enabled earlier, while initial exchange liquidity is still pending. Planned launch funding and LP lock duration must not be presented as executed transactions.

DEX Item	Status / Reference
Token Pair	0x6cFF8650a2e8Affd64a48eaf227A0C74cE767892
PancakeSwap V2 Router	0x10ED43C718714eb63d5aA57B78B54704E256024E
Contract-Level Trading	Enabled; this is not equivalent to a live market
Initial VLT/BNB Liquidity	Not yet deposited as of this edition
Initial LP Token Lock	Pending; verifiable transaction and locker to be published
Live Price / Market Volume	Not established; no promise of liquidity or trading activity

Market integrity: Any future listing date, opening price, initial BNB reserve, market capitalization, trading volume or fee revenue is conditional. Neither the historical presale target price nor the presence of a trading pair guarantees an executable purchase or sale.

11. Transaction Fees & Liquidity

The deployed VLT token contract applies the current fee model to qualifying buys and sells through recognized automated-market-maker pairs. Ordinary wallet-to-wallet transfers should not be described as equivalent to DEX buys or sells.

Transaction / Mechanism	Current Configuration
Qualifying Buy	2% fee
Qualifying Sell	4% fee
Fee Balance	Collected VLT fees accumulate in the token contract
Processing Trigger	Authorized processFees() call; manual / keeper-compatible
Processed Fee Value	50% economic share to liquidity / 50% to VLT Treasury
Fee-generated LP tokens	Directed to designated DEAD burn address by the processing mechanism
Initial DEX LP	Independent of fee processing; lock not yet published

11.1 Processing and Treasury Accounting

When an authorized fee processor calls **processFees()** and transaction thresholds permit it, the smart contract may convert accumulated VLT, pair appropriate liquidity contributions with BNB and account for the Treasury portion. Economic results depend on routing, slippage, gas, actual market activity and balance availability.

The VLT Treasury is defined in the token contract. It is not the same as customer wallet custody or the operating cash of VOLT-LABS LLC. Treasury BNB may require a separate claim/payment flow under the source code. Fee accumulation does not imply instant conversion or automatic payout on each purchase.

11.2 Launch Controls & Owner Functions

Feature	Relevant Model
Maximum transfer / wallet limits	Current configured anti-whale limits: 30,000 VLT each*
Exempted operational wallets	Specific exemptions may be configured by the contract owner
Fees and locks	Fee reduction and irreversible lock/finalization functions exist
Ownership	Ownership controls remain significant until explicitly finalized/renounced

* Anti-whale figures reflect the project's reported configuration before launch; confirm live owner/read-contract values before relying on them. The contract can exempt specific addresses, so a large reserve address is not evidence that transfer limits are inactive for ordinary buyers.

Neither the fee model nor liquidity additions guarantee a price floor, daily revenue, a specific pool depth, investor returns, or a stable token market.

12. Independent Audit & KYC

VLT has a publicly accessible independent smart-contract audit by **Cyberscope**, alongside a published **project KYC** record. The auditor's original report is the authoritative source for the scope, observations, and their current status.

Public Verification	Status / Scope
Cyberscope Smart-Contract Audit	Published - VLT token smart contract
Cyberscope KYC	Published - project identity verification
Audit Coverage	VLT token contract; not a certification of wallet apps or backend
Follow-up Review	Re-audit planned after the liquidity launch stage

View the official Cyberscope audit report

View the Cyberscope KYC certificate

Audit update policy: The project intends to arrange a follow-up Cyberscope review after initial liquidity deployment and launch-stage changes. Until a new report is published, the current audit report remains the source for findings and their status. Audit and KYC do not guarantee security or investment outcomes.

13. Internal Testing & Validation

The historic build/test records published with VLT describe the following testing and analysis. These are **project-reported internal and automated validation results**, not a replacement for independent review.

Validation	Reported Result
Local Hardhat Tests	93 / 93 passing
BSC Mainnet Fork Test	1 / 1 passing
Combined Functional Tests	94 / 94 passing
Mythril	Static analysis run completed
SolidityScan	Historical score 93.18 / 100; 0 critical, 0 high
Deployed Source	Verified Exact Match on BscScan
Solidity Build	Compiler 0.8.35 / optimizer 200 runs / EVM Paris

14. Security Boundaries & Governance

14.1 Token Contract Versus Applications

A VLT token contract audit evaluates contract source and certain assumptions at the time of review. It is **not** a certification of VoltPay web services, authentication, API usage, extensions, mobile applications, custody workflows or third-party integrations. Those components require their own controls, assessment and maintenance.

14.2 Founder, Token Treasury & VOLT-LABS LLC

The Founder's personal token allocation, VLT token Treasury/reserve holdings and VOLT-LABS LLC's separate application business must be accounted for independently. Reserve labels describe intended usage but do not create additional independent legal owners or on-chain time locks.

14.3 Governance and Administrative Controls

- Owner privileges and exemptions can affect token transfer conditions; verify the current contract state directly.
- Fee parameters can be reduced and permanently locked through specified contract controls; execution must be proven on-chain.
- Vesting release rights arise from individual locker conditions; future release eligibility is not evidence of sale.
- Project-controlled reserve wallets carry concentration and key-management risks; multiple addresses do not eliminate common control.
- Plans for multisignature arrangements, expanded reporting or external approvals are not represented as already implemented.

15. Sustainability & Operating Model

VoltPay's long-term economic plans include genuine ecosystem usage, potential token-associated services, fee-supported liquidity when trading exists, and approved third-party integrations. Revenues, listings and market activity depend on demand, infrastructure, execution and regulatory conditions; none is guaranteed.

Market conduct: The project should not represent wash trading, fake volume, artificial holders, guaranteed appreciation or manipulated market activity as legitimate adoption. All public claims should distinguish verified on-chain facts from targets and plans.

16. Roadmap & Milestones

This roadmap distinguishes completed infrastructure tasks from work still in progress and third-party-dependent plans. Dates are not guarantees and must be revised when circumstances change.

Workstream / Stage	Status and Description
Mainnet Contract	Completed - deployed VLT token; verified source; fixed 200M supply.
Internal Testing	Completed - reported 94/94 functional validations and automated analyses.
Audit & KYC	Cyberscope audit and KYC published; follow-up review planned after liquidity launch.
Public Presale	Concluded - GemPad soft cap not reached; no successful finalization.
Token Allocation Reset	Completed as project-reported - 25M new lock and 53M wallet allocation.
DEX Market Launch	In preparation - fund VLT/WBNB pool, verify swaps, publish LP lock.
Wallet & VoltAI	Web and Telegram experiences; iOS App Store, Android Google Play and Chrome extension published. Continued development and security work.
On-Ramps / Merchants	Planned or partner-dependent; subject to business and compliance approvals.
Gas Sponsorship	Exploratory feature; eligible transfers still require network gas.

17. Transparency & Reporting Policy

- Publish the complete fixed supply and allocation table with dated revisions.
- Provide verifiable full addresses of controlled reserve wallets and relevant PinkLock entries.
- Report the date and transaction reference when a pending LP deployment or LP lock is executed.
- Keep discontinued presale materials as historical records rather than active offers.
- Disclose material changes to owner permissions, contract configuration, audit status or allocation policy.

Freshness policy: Token wallet balances, platform scores, smart contract permissions and locker balances can change after the publication date. Independent chain records and current auditor findings take precedence over static snapshots.

18. Contract & Verification References

On-Chain / Source Item	Reference
VLT Contract	0xE90714e6e4becEc65F33D3099F95B42B6e3168aE
Deployer Address	0x5C6D50A3f249C8a5c48029Cf0c119E760Af48dD4
Token Treasury	0x1534Ea13991850D77e0eEeb412F075aE92E3Ff24
PancakeSwap V2 Router	0x10ED43C718714eb63d5aA57B78B54704E256024E
VLT/WBNB Pair	0x6cFF8650a2e8Affd64a48eaf227A0C74cE767892
Compiler / Settings	Solidity 0.8.35 / 200 optimizer runs / EVM Paris

The deployed source is frozen. Documentation, allocation labels and website content do not modify deployed bytecode. Avoid publishing confidential credentials, private keys or wallet recovery phrases.

19. Risk Disclosure

- **Capital and price risk:** VLT may lose substantial or all of its value. Neither the audit nor lock schedule ensures future demand or a minimum token price.
- **Liquidity risk:** the initial PancakeSwap V2 pool has not yet been confirmed funded; low reserves may cause large price impact or inability to exit.
- **Concentration risk:** the 53M unlocked allocations remain under founder/project control. Future movement of reserves can influence available supply.
- **Technical risk:** smart contracts, wallets, devices, RPCs, bridges and related backend services may fail or contain exploitable defects.
- **Audit limitations:** Review the full current Cyberscope report for the auditor's findings and their status. A follow-up audit is planned, but not yet completed. KYC is not a guarantee of technical security or investor protection.
- **Third-party and regulatory risk:** app distribution, on-ramps, trading services and merchant partnerships depend on external providers and legal requirements.
- **Execution risk:** product expansion, listings, liquidity, LP locking, timelines and utilities may be delayed, changed or not delivered.

This document is informational and does not constitute an offer of securities, investment advice, a guarantee of profits, a promise of token value, or a representation that all planned functions are available.

20. Revision History

Edition	Purpose
Version 3.0 Rev2 - Sep 2026	Historical presale-era tokenomics, roadmap and lock snapshot.
Version 3.1 - Nov 9, 2026	Updated allocation and locks, seven reserve wallets, audit/KYC, iOS and Android app availability, and DEX launch preparation.

21. Conclusion

VoltPay combines a publicly verifiable VLT smart contract with evolving wallet and AI experiences. Version 3.1 establishes a more explicit separation between fixed total supply, long-term locks, project-controlled unlocked allocations and a DEX launch that remains pending liquidity. The official transparency and source links below allow readers to independently review the underlying records.

Document date: 9 November 2026 | **Network:** BNB Smart Chain | **Token:** VoltPay (VLT)
